Installation

Remove the intake air hose from the front of the turbo and disconnect the coolant line brackets from the stock manifold.

Now disconnect the turbo from the stock manifold by removing the 4 15mm nuts. *Note that you do not need to remove the turbo from the engine compartment.*

Once the turbo is disconnected from the manifold, remove the manifold by removing all the bolts using a 13mm socket.

Once the manifold is removed, clean the head and turbo flange surfaces of any debris.

Remove the two studs from the turbo exhaust housing and discard.

Remove the two studs from the stock manifold and install them into the same hole location of the performance manifold.

INSTALL 6 NEW GASKETS IN BETWEEN THE HEAD AND THE MANIFOLD

Install the new performance manifold utilizing the factory bolts and spacers. You will need to use the two 10x35mm long stainless Allen bolts and washers for the two top mounting holes of the center section of the manifold. Torque bolts to 35 ft/lbs.

INSTALL A NEW GASKET IN BETWEEN THE TURBO AND THE MANIFOLD

Place the turbocharger onto the performance manifold, the two studs should be inserted in the turbocharger flange. Re use the two 15mm factory nuts.

Use the remaining two 10 x 45mm Stainless Allen head bolts and washers to secure the turbocharger to the manifold. Tighten to 35 ft/lbs.

After installation is complete, re-install the coolant line brackets.
