

Sky Pods LED CAB LIGHTS

INSTALLATION INSTRUCTIONS

STEP 1:

It's a good idea to clean the area you'll be working with thoroughly with warm soap and water. Determine the spacing that you wish to use by cutting out the included templates and placing them on the roof of your truck. When you have the desired spacing, tape them down.

STEP 2:

Pull back your headliner so that when you drill the holes for the wiring and mounting screws, you do not damage it. Use a 1/16 " drill bit for the mounting screws and a 1/4 " drill bit for the center wiring hole.

STEP 3:

Once you have fed the wires through the hole CAREFULLY, connect the black wire to any ground. Connect the red wire to a 12V+ source; either a switch or directly to your running (parking) lights. Connect the white wire to your reverse indicator light 12V + wire.

STEP 4:

Before you install the included screws to finalize the installation, you may wish to use some silicone around the drilled holes or on the tips of the screws to ensure a strong seal.

STEP 5:
